NIKHIL KUMAR GUPTA

SOFTWARE DEVELOPER | NAPASOFT (CLIENT: TATA STEEL)

Curious by nature and driven by problem-solving, I started my journey in software development with a love for mathematics and logic. Over the past 3 years, I have grown into a Full Stack Developer working with C#, ASP.NET, SQL, and JavaScript to build enterprise solutions at Tata Steel. I enjoy designing applications that make processes easier and more efficient. For me, every project is an opportunity to learn, collaborate, and create something meaningful.

Portfolio

Expertise

- C#
- SQL
- JavaScript
- ASP.NET
- WinForms
- Web Forms
- WCF
- MVC 5
- ASP.Net Core MVC
- Web API
- Entity Framework Core
- Identity Core
- LINQ
- HTML5
- CSS3
- Bootstrap 5
- IIS
- jQuery / AJAX
- Git / GitHub

Language

English

Hindi

Experience

Nov 2023 - Present
Junior Software Developer – Napasoft (Client: Tata Steel)
Jamshedpur, Jharkhand

- Responsible for the full development lifecycle including design, development, and deployment.
- Built dynamic UI using JavaScript, jQuery, AJAX, SVG, and Canvas
- Wrote efficient, reusable C# code for console and web applications.
- Integrated with APIs and third-party tools for enterprise solutions.
- Conducted reverse engineering of legacy applications to identify database structures.
- Optimized system performance for speed and reliability.
- Collaborated with cross-functional teams to deliver scalable enterprise applications

Jan 2023 – Aug 2023
Intern – Full Stack Developer, Napasoft
Jamshedpur, Jharkhand

- Built Master Mech, a billing & inventory management system using WinForms + ASP.NET MVC 5.
- Created Click Booster, a Windows-based game with 4 difficulty levels to improve children's cursor movement.

Education

B.Sc. Mathematics (Hons.) – Kolhan University (2022)

Higher Secondary (Science) – JAC Board (2018)

Matriculation – JAC Board (2016)

STRENGTHS

Strong debugging & problem-solving skills
Experience in real-time and industrial applications
Quick learner, adaptable to new technologies
Focused on clean coding & performance optimization

CERTIFICATIONS

Certified Full Stack Developer

Napasoft

PROJECTS

Blast Furnace Monitoring System (Tata Steel) – Web App

- The Blast Furnace Monitoring System is used to track real-time parameters like temperature, pressure, and levels in steel manufacturing.
- The system follows a three-layer architecture: a Data Access Layer using ADO.NET, a WCF service layer for communication, and an ASP.NET Web Forms UI layer.
- I worked as a Full Stack Developer, where I developed the UI using HTML, CSS, Bootstrap, and JavaScript. I implemented Login and Signup functionality and designed a Master Page with a dynamic side navigation menu for better user experience and navigation across multiple pages.
- I used AJAX for real-time data updates and implemented data visualization using CanvasJS and Highcharts. Additionally, I worked with SVG and HTML Canvas to build interactive visualizations for better monitoring of furnace parameters.

Tech: ASP.NET Web Forms, C#, WCF, Oracle, AJAX

Ladle Tracking System (Tata Steel) – Web App

- Designed and developed a real-time Ladle Tracking system to monitor movement and status of ladles and cranes in an industrial environment for Tata Steel
- Built an interactive plant layout using SVG-based dynamic positioning for accurate visualization of stations, tracks, ladles, and cranes
- Implemented real-time updates using jQuery and AJAX (polling) to track live movement without page reload
- Developed backend services using C#, ADO.NET, Oracle, and ASMX Web sevice for real-time and manual data processing
- Designed intuitive UI with tooltip-based visualization to enhance monitoring and user experience
- Developed CRUD modules, interactive dashboards using CanvasJS, and filterable tables for monitoring and data analysis

Tech: HTML, CSS, JS, Oracle, ASMX Web service

PLC Sensor Data Processor (Tata Steel) – Console App

- Processed real-time sensor data from PLC via OPC server
- Mapped and validated OPC tags before storing in database
- Ensured continuous data flow and error handling

Tech: C#, Oracle

Process Monitor (Tata Steel) – Windows Utility

- Developed tool to automate execution of multiple applications
- Provided UI with checkbox-based process control
- Monitored and managed running processes using system APIs

Tech: C#, WinForms

CO-CIRRICULAR ACTIVITIES

Full Stack Learning Platform – Web App

- Designed an interactive platform for learning full-stack development.
- Features include accordion-based courses.
- live coding practice, and quizzes.(Pending..)

Tech: ASP.NET Core MVC, Bootstrap, SQL Server, AJAX

Dynamic Org Structure Management System – Web App

- Developed a drag-and-drop org hierarchy system with grade-based levels.
- Added workflow approvals and audit trails for structural changes(Pending..)

Tech: ASP.NET Core MVC, JavaScript, OrgChart.js, SQL Server
